

# Vyond Animation

## John Bunbun the Rabbit

I created this animation to practice using visual cues (such as stock expressions and spatial perspective) and audio cues (such as music and sound effects) to tell a story.

## Trench Composting 101

In this microlearning video, I created a custom character (a talking banana) by altering a stock animated character and adjusting their clothing to match the color of the banana, removing the head (except the mouth and eyes), and cropping the character - then, setting that face on top of the banana and assigning my recorded audio to the character.
